UPDATED

Thanks for purchasing!

Welcome to our first Metal pack which includes a great collection of our best High Gain amp profiles.

We have been experimenting very long and finally found the "sweet spots" that make these amps so popular. We have used first-class recording equipment such as the classic Neve® 1073 preamps from the Aurora Audio® Sidecar (Hand Built by Geoff Tanner). The results are extremely dynamic guitar sounds with soft silvery highs and rich punch.

We tested all profiles on hi class monitors like Neumann, JBL & Genelec and on every system the profiles just sounded perfectly balanced.

The studio profiles also work great on tube amp returns with monitor out (and cab off).

- ▶ Selected amps with typical sweet spots
- ▶ Professional sound engineer
- ▶ 1st class studio equipment
- ▶ Suitable effects of the KPA
- ▶ No mastering (like compression etc.)

So we guarantee

You Always Get What You Hear!

This collection will be constantly updated

FOR FREE!!!!

As soon as we added a new amp profile just download this pack again from www.guidorist.com and you'll instantly get the new one.
